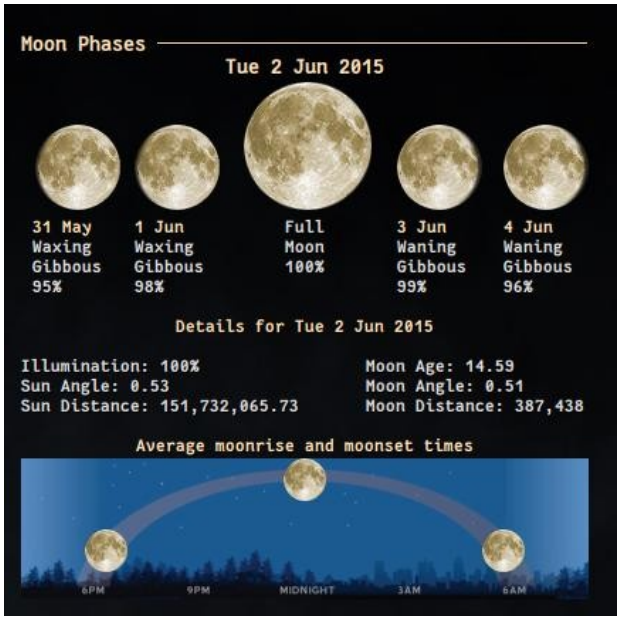
Script 4: Moon Phases Script



It uses the site

http://www.moongiant.com/

Put the 4_Moon folder in your home folder.

Navigate inside the folder and open the script (moon_MoonGiant) with your favourite editor. Replace the variable hemisphere with whatever applies to your place, ie. northern (north) or southern (south).

Make the script executable:
Either by right clicking it or by

```
chmod +x ~/4_Moon/moon_MoonGiant
```

I've included two .conkyrc files with the script. You can intergrate them into your own .conkyrc file or run them individually with

```
conky -c /path/.conkyrc_4_Moon_S11_V1
```

or

```
conky -c /path/.conkyrc_4_Moon_S11_V2
```

The script downloads a lot of stuff - feel free to subtract.
